

RUMATAIN MULTI-NUTS

A SPECIALIST RUMINANT SPECIES FEED PELLET

Large mineralised pellets suitable for feeding to cattle, sheep, deer and goats

A good source of readily digestible energy, **RUMATAIN-multi nuts** can be fed to any ruminant animal as a complement to forage to help sustain life or increase production. Always give access to clean drinking water and roughage such as grazing, forage crops or conserved forages to maintain rumination activity.

Typical Analysis (Dry matter basis):

Minimum Crude Protein	12%
Maximum Crude Fat	4%
Maximum Crude Fibre	8%
Maximum Salt	1%
Minimum ME	12%

INGREDIENTS SELECTED FROM:

Cereal grains, grass fibre, palm kernel meal, molasses, limestone, causmag, trace elements (including copper and selenium) and vitamins.

DIRECTIONS:

As with any new feed, only offer a small amount initially and increase gradually. Try to ensure that all animals have good access to pellets when fed.

CONTRADICTIONS:

Contains copper so do not feed to sheep that are housed for extended periods.

Not suitable for feeding at a high rate to feedlot fattening male lambs due to magnesium content.

Specialist products can be manufactured if required.

Additional mineral supplementation may be required at key times by specific classes of stock.

Additional selenium or copper should only be given following consultation with a nutritionist or veterinarian.

WITHOLDING PERIODS:

Cattle meat nil. Milk nil.

Typical feed rates:

Calves and growing cattle	0.5 to 2kg per head per day
Lactating cattle	1 to 4 kg per head per day depending on level of production and forage available
Fattening cattle	1 to 4 kg or more depending on the system
Sheep and goats	250 to 1000g per head per day
Deer	250 to 1000g per head per day
